SAFETY

Installation.

Unless otherwise stated TSL equipment may be installed at any angle or position within an operating temperature range of 5° - 30°C.

All TSL equipment conforms to the EC Low Voltage Directive:

EC Low Voltage Directive (73/23/EEC)(OJ L76 26.3.73)(LVD). Amendment: (93/68/EEC) (OJ L220 30.8.93).

In all cases the chassis of the equipment must be earthed on installation.

The external power supply provided with this product may be one of two types:

1. A Class 2 double insulated type with a 'figure of eight' mains input connector.
2. A Class or Level 3 type with an IEC mains input connector. This type offers a functional earth and **NOT A SAFETY EARTH** via the earth pin of the IEC mains input connector to the outer of the co axial power connector or the pin nearest the pip on the Lemo style connector.

All metal panels are bonded together.

Check that the voltage selector setting (if fitted) and the fuse rating is correct for the local mains supply.

Due consideration for cooling requirements must be given when mounting the equipment. It is recommended that a 1RU of rack space, or a vent panel, should be left above and below the unit.

This unit requires rear support.

WARRANTY, MAINTENANCE AND REPAIR

All TSL equipment is guaranteed for one year from the date of delivery to the customer's premises. If the equipment is to be stored for a significant period, please contact TSL concerning a possible extended warranty period.

Failure during warranty

If any TSL product should fail or become faulty within the warranty period, first please check the PSU fuses.

All maintenance work must be carried out by trained and competent personnel.

If equipment has to be returned to TSL for repair or re-alignment, please observe the following overleaf:

TSL Returns Procedure

Please telephone +44 (0)1628 564610 and ask for Support who will provide a Returns Number. This will enable us to track the unit effectively and will provide some information prior to the unit arriving. Please do NOT return faulty equipment without first obtaining a returns number as this is likely to result in a delay in the repair of the equipment.

For each item, this unique Returns Number must be included with the Fault Report sent with the unit.

A contact name and telephone number are also required with the Fault Report sent with the unit.

Fault report details required.

Packing

Please ensure that the unit is well packed as all mechanical damage is chargeable. TSL recommends that you insure your equipment for transit damage.

The original packaging, when available, should always be used when returning equipment..

If returned equipment is received in a damaged condition, the damage should be reported both to TSL and the carrier immediately.

- Two HD/SDV auto sensing inputs
- Out-of-phase error indication
- EBU Digital and PPM metering scales
- Encoded PAL/NTSC composite or SDI output (Switch selectable)
- Re-clocked serial output of the selected input
- Integral loudspeaker system
- 40 Watt total amplifier power with 12VDC input
- Headphone outputs with LS muting
- Two 12V DC inputs
- Stereo /multi channel line outputs
- Two decoded AES outputs
- Variable line output

2.0 Front Panel Controls and Indicators

2.1 Input and Meter Selection Switches

Digital Source Select	Selects AES 1-2 and 3-4 (in conjunction with the channel switch) and SDI 1 & 2 Groups 1-4
Channel Select	Selects AES1,2,3 and 4 and pairs 1 (D1) and 2 (D2) from both the SDV inputs. Analogue 1 and 2 are also selected in position Anl 1 and Anl 2.
Meters	Left Channel is fed to the left bargraph and Right Channel is fed to the right bargraph.
Phase	Momentary phase reverse between A1 and A2 pairs. A non latching push switch with Red/Green LED indicates phase. Push to reverse.
Volume Control	Allows the audio level to be varied.

2.2 Monitoring select Switch

This switch allow stereo, Left, Right and Mono to be monitored from the internal loudspeakers and line outputs.
N.B. Position D is spare.

4.0 Notes

There are no user adjustable assemblies/components within this unit.

This unit requires rear support when rack mounted.

In order to affect status changes of the unit using the rear DIP switch, the unit will require re powering before the changes take effect.

Output analogue levels are adjustable over the following range:

0dBm = 0.775V into 600Ω i.e. 1mW power dissipation.

0dBu = 0.775V RMS = PPM 4.

Nominally, -18 dB ref 0FS = 0dBu output.

European line up : -18 dBu

American line: -20 dBu

5.0 General Notes

Please note that some American equipment has the function of the XLR pins 2 & 3 reversed.

TSL product is wired to the European standard

The screw locks on the D25 connectors use UNC 4-40 standard threads.
